                                                                                    leukocytes recruitment.
SUBNUT: Heterodimer of an alpha and a beta subunit. Alpha-L
SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Leukocytes.
DOWAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
SIMILARITY: Contains 7 FG-GAP repeats.
SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PERMY PROUBLY STATEMENT OF THE STATEMENT

Screening assay for modulators of integrin binding - using immobilised or labelled alpha-d polypeptide, useful for, e.g. treating type-I diabetes.

Example 5; Fig 1A-D; 106pp; English.

This sequence represents a human beta-integrin CD11b subunit which is used to describe a method for identifying compounds that modulate the interaction of the beta-integrin alpha-d subunit with a binding partner of alpha-d which involves contacting an alpha-d polypeptide with an alpha-d binding partner, one of which is immobilised and the other of which is labelled, in the presence of a test compound, and determining if the compound affects binding between the alpha-d polypeptide and alpha-d binding partner, where the alpha-d polypeptide is alpha-d or its fragment comparising the cytoplasmic, transmembrane or extracellular domain of alpha-d. Compounds that modulate alpha-d binding could be used to treat

Example 5; Fig 1; 270pp; English.

Integring are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a beta subunit. One class of human integrins are restricted to expression in white blood cells and have a common beta2 subunit: the leukocyte cintegrins, Leu-CAMS, leukointegrins or beta2 integrins. Beta2 integrins have an importent role in immune and inflammatory responses. The present protein sequence is the human integrin alpha subunit CD11b. This sequence was used in an alignment to identify a novel beta2 integrin alpha approximately 60% identity to the protein sequence of alpha d. The capproximately 60% identity to the protein sequence of alpha d. The capproximately 60% identity to the protein sequence of alpha d. The capproximately for diseases linked to aberrant alpha d function e.g. Type I diabetes, atherosclerosis, multiple classis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome, rheumatoid arthritis and leukocyte adhesion deficiency (LAD). In addition, anti-alpha d monoclonal antibodies may be used in the inhibition of macrophage infiltration at the site of a central nervous system injury. The monoclonal antibodies can also be used to detect and diagnose Crohn's disease

This invention relates to a modified integrin-I or integrin I-like domain to polypeptide comprising at least one disulfide bond so that the domain is stabilised in a desired conformation. The polypeptide of the invention or may have antiinflammatory or imunosupressive activities. The many have antiinflammatory or imunosupressive activities. The solf-peptides of the invention have an open conformation and are useful as immunogens to produce autibodies that selectively bind to integrin I-c domain; and for identifying a modulator of integrin activity, or of for interaction of an integrin and a cognate ligand. The polypeptide of the invention, or antibodies (preferably anti-LFA-I antibody) is useful for treating or preventing an integrin mediated disorder which is a an integrin to a cognate ligand such as Crohn's disease.

Composition comprising the a cognate ligand such as Crohn's disease.

Composition comprising the peptide of the invention is useful for composition comprising the peptide of the invention is useful for treating an integrin mediated disorder in a subject. The polypeptides and/or active or antigent fragments are useful as reagents for diagnosis of integrin-I alpha-M protein subunit used to generate the mutant

Beta2 integrin, alphaD subunit, CD11c subunit, CD11b subunit, LAD; leukocyte adhesion deficiency; inflammatory response; diabetes; unulippe sclerosis, aneuroprotective; inflammatory bowel disease; Crohn's disease; ulcerative colitis; immune complex alveolitis; leukaemia; ICAM-R; VCAM-1; anti-inflammatory; infracellular cell adhesion molecule; vascular cell adhesion molecule; autonomic dysfunction; sensory dysfunction; spinal cord injury.

orUse of an anti-alpha-d monoclonal antibodies for promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury.

Example 5; Page 191-194; 270pp; English.

The invention relates to promoting locomotor recovery, inhibiting concounts damage, limiting locomotor impairment, or limiting autonomic locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury victim. The method also involves the use of a ligand cord injury victim. The method also involves the use of a ligand cord injury victim. The method is useful for promoting component cell adhesion molecule. The method is useful for promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury. In particular, the spinal cord injury comprises compression of the spinal cord. The antibodies are also useful for reducing inflammation at the site of a central nervous system injury. The specification also details the identification of Beta2 integrin alphab cord in raising the antibodies. Beta2 integrins of are implicated in diseases such as LAD (leukcoyte adhesion deficiency, inflammatory response, diabetes, multiple sclerosis, arthritis, graft collins, immune complex alveolitis and leukemia. The present sequence is a Beta2 integrin alphab protein sequence included for comparison with the beta2 integrin alphab protein sequences

The invention comprises structurally biased variant integrin inserted (I)

domain proteins, wherein the alterations to the protein occur in at least

two noncontinuous regions. Specifically the the variant integrin I domain

proteins are structurally biased to exist in the open conformation.

thereby altering the binding ability of the protein. The invention also

comprises nucleic acids encoding the variant integrin I domain proteins.

The integrin I domain proteins and nucleic acids are useful for treating,

preventing or suppressing integrin related inflammatory and immunological

disorders (e.g. rheumatoid arthritis). The variant integrin I domain

C proteins and nucleic acids can also be used for treating: ischaemia/

c reperfusion (e.g. hypovolemic shock); infarction, cerebral shock, viral

c infection; and cancer. The variant integrin I domain nucleic acids and

proteins may be used in gene therapy, as vaccines and to screen for

c bloactive agents. The present amino acid sequence represents the Mac-1

The invention relates to a binding domain-immunoglobulin fusion protein comprising a binding domain polypeptide that is fused to an immunoglobulin hinge region polypeptide, an immunoglobulin heavy chain CH2 constant region polypeptide that is fused to the hinge region polypeptide that is fused to the hinge region polypeptide that is fused to the CH2 constant region polypeptide comprises: a wild-type human IgG1 immunoglobulin hinge region polypeptide, a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains 2 cysteine residues, where the first cysteine is not mutated; a mutated human IgG1 immunoglobulin hinge region polypeptide contains 3 or more cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide contains or cysteine residue; and a mutated human IgG1 immunoglobulin hinge region polypeptide contains or cysteine residue a mutated human IgG1 immunoglobulin hinge region polypeptide contains contains the mutated human IgG1 immunoglobulin hinge region polypeptide contains con cysteine residues the mutated human IgG1 immunoglobulin hinge region polypeptide contains con cysteine residues the mutated human IgG1 immunoglobulin hinge region polypeptide contains con cysteine residues the mitated human IgG1 immunoglobulin hinge region polypeptide contains con cysteine residues the mitated human IgG1 imminoglobulin hinge region polypeptide contains con cysteine residues the mitated human IgG1 imminoglobulin hinge region polypeptide contains con cysteine residues the mitated human IgG1 imminoglobulin hinge region protein is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       capable of at least one immunological activity comprising antibody dependent cell-mediated cytotoxicity (ADCC) and complement fixation. The binding domain polypeptide is capable of specifically binding to an antigen. Also included are an isolated polymuclectide encoding the binding domain-immunoglobulin fusion protein, a recombinant expression construct comprising the polymuclectide (operably linked to a promoter), a host cell transformed or transfected with a recombinant expression construct, producing the binding domain-immunoglobulin fusion protein, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New binding domain-immunoglobulin fusion protein, useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, Grave's disease or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; SEQ ID NO 176; 157pp; English.

pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein or polymucleotide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, carcinoma or sarcoma, rheumatoid arthritis, mysathenia gravis, Grave's disease, type I diabetes mellitus, multiple sclerosis or autoimmune disease. The present sequence is a binding domain-immunoglobulin fusion protein-associated protein sequence. Note: The immunoglobulin for this patent formed part of the printed specification and is also available in electronic formed trectly from USPTO at sequence that sequence that printed specification in dentified the sequences in the printed specification by their SEQ ID number therefore none of the sequences can be explicitly identified.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   96
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mac-1 alpha subunit is involved in the response to inflammation, i.e. recognition of and migration to sites of inflammation. It also attaches to cellular substrates as part of this function making it useful in visualising endothelial tissue. Mac-1 is a member of the Integrin Gene superfamily.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel isolated or recombinant modified integrin protein having extracellular domains of integrin alpha and beta subunits where one of the subunits has one or more mutations, an altered subratice feature or an amino acid substitution or internal deletion, extracellular domains of the integrin beta subunit that comprise a mutation that alters a non-cystain residue to cysteine or extracellular domains of integrin alpha and beta subunits. The polypeptide of the invention demonstrates antipsoriatic, thrombolytic, anticoagulant, osteopathic, cytostatatic, immunosuppressive, antiinflammatory, neuroprotective and antisickling activities and may be useful for immunotherapy in order to prevent or treat an integrin-mediated disorder such as an inflammatory disorder, an autoimmune disorder, thrombosis, cancer, osteoporosis, sickle cell anaemia, psoriasis and multiple subunit precursor protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RLQVPVEAVNMSLGLSLAATTSPPQLLACGPTVHQTCSENTXVKGLCFLFGSNLRQQPQK 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        436
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          496
                                                                                                                                                              Diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual, comprises detecting the expression level of
                                                                                                                                                                                                                                                                             The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, renotranical organ replacement rejection, in an individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a protein that is encoded by the mRNA of the invention.

The present invention describes a method (MI) for identifying an inhibitor of HIV entry into a human host cell. (MI) comprises identifying an inhibitor of a cell surface polypeptide selected from CXRR-4 (352 amino acids, SEQ ID NO:8, ADP44055), CCR7 (378 amino acids, SEQ ID NO:12, ADP44065), CDIC (1163 amino acids, SEQ ID NO:12, ADP44065), CDIC (1163 amino acids, SEQ ID NO:14, ADP44061), CDJ7 (323 amino acids, SEQ ID NO:20, ADP44067), CDJ7 (522 amino acids, SEQ ID NO:20, ADP44067), CDJ7 (566 amino acids, SEQ ID NO:22, ADP44067), CDJ7 (566 amino acids, SEQ ID NO:22, ADP44065), CSP3R (836 amino acids, SEQ ID NO:24, ADP44071), RARA (462 amino acids, SEQ ID NO:26, ADP44073), GABRIA (576 amino acids, SEQ ID NO:22, ADP44077), GABRIA (576 amino acids, SEQ ID NO:32, ADP44077), GABRIA (576 amino acids, SEQ ID NO:30, ADP44077), GABRIA (570 amino acids, SEQ ID NO:30, ADP440079), GABRI β a human host cell useful for preventing and/or treating HIV infection, identifying an inhibitor of a cell surface polypeptide such as CXCR-4. exemplification of the present invention Claim 1; SEQ ID NO 14; 133pp; English

                                                                                                                                                                       à
                                                                                        ò
                                    The invention comprises marker genes for inflammatory bowel disease (IBD) - FcgammaR IIIa, FcgammaR IIIb, Mig, NRG-2, hexokinase, HM74, RBG III, LDAP, Mip-1(beta), L-selectin, EGFL6, IDO, IL-8, CD1C, and TLR2 genes. The DNA and protein sequences of the invention are useful in the detection and treatment of IBD (e.g. ulcerative colitis and Crohn's disease). The present amino acid sequence represents an IBD marker
                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                            137

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcome in the may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             317
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    437
Clone lambda X47 was isolated from a cDNA library constructed from total NMA extracted from photobol myristate acetate stimulated HL-60 myelomonocytic cells. The library was screened with oligomucleotide probes based on tryptic peptide fragments of p150.95. The sequence can be attached to appropriate control elements and expressed in prokaryotic and expressed in prokaryotic and expressed in prokaryotic and expressed in prokaryotic and infection because it interacts with ICAM-1 and inhibits cell-virus attachment. It can also be used as an anti-inflammatory agent. See also AAQ06063.4, AAR07121.8 and AAR07122-6. (Updated on 25-WAR-2003 to correct PR field.)

This sequence represents a human beta-integrin CDIIc subunit which is used to describe a method for identifying compounds that modulate the interaction of the beta-integrin alpha-d subunit with a binding partner of alpha-d which involves contecting an alpha-d polypeptide with an alpha d binding partner, one of which is immobilised and the other of which labelled, in the presence of a test compound, and determining if the compound affects binding between the alpha-d polypeptide is alpha-d binding partner, where the alpha-d polypeptide is alpha-d or its fragment comprising the cytoplasmic, transmembrane or extracellular domain of alpha-d. Compounds that modulate alpha-d binding could be used to treat diseases such as type-I diabetes, atherosclerosis, multiple sclerosis, asthma, psoriamis, lung inflammation, acute respiratory distress syndrome and rheumatoid arthritis
                                                                                                                         1019

Integrins are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a cet as subunit. One class of human integrins are restricted to expression in white blood cells and have a common beta2 subunit: the leukocyte integrins, Leu-CAMS, leukointegrins or beta2 integrins. Beta2 integrins have an important role in immune and inflammatory responses. The present protein sequence is the human integrin alpha subunit CDIC. This sequence was used in an alignment to identify a novel beta2 integrin alpha subunit: alpha d (AAA60014 and AAB07359). The present sequence has subunit: alpha d (AAA60014 and AAB07359). The present sequence has comproximately 68 identity to the protein sequence of alpha d. The CAlpha d gene and protein may be useful in therapy for diseases linked to aberrant alpha d function e.g. Type I diabetes, atherosclerosis, multiple consistness syndrome, rheumatoid arthritis and leukocyte adhesion deficiency clastress syndrome, rheumatoid arthritis and leukocyte adhesion deficiency clastress injury. The monoclonal antibodies may be used in the integrin injury. The monoclonal antibodies can also be used to detect and
